TEXT:

NEW YORK -- Whether circuit-switched or Internet-protocol, the business of providing local **telephone** services to cable operator's revenues over the next few years. That was the resounding message at a Kagan Seminars Inc. conference here last Wednesday, when representatives from Cox **Communications** Inc., **MediaOne** and Tele- **Communications** Inc. shared practical experience and future plans with a roomful of **financial analysts** . MediaOne, which was "very pleasantly surprised" by take rates for the HFC (hybrid fiber-coaxial...

...is also picking up 5 percent to 8 percent more cable subscribers just by offering **telephone** service, said Greg Braden, vice president of telephony for the MSO. "It's a great...

...lift for us," he added. TCI will throw its Fremont, Calif., system into the HFC- **phone** mix before pushing ahead heavily with IP- **phone** services next year, said David Beddow, executive vice president of TCI and CEO of the...

...with AT&T Corp. early next April, he added. TCI's early work in cable- **phone** service reached its Hartford, Conn., and Arlington Heights, Ill., systems three years ago, but it had trailed off in favor of an aggressive digital- **video** push-until now. "AT&T's plan is to be in a full-U.S...

...Tod Jacobs, a senior telecommunications-research analyst for Sanford C. Bernstein & Co., presented a comprehensive **financial model** for cable-delivered IP telephony at the conference, showing that over the next four to...

...by regional Bell operating companies, so AT&T will push back with cable-delivered local **phone** service. This will trigger RBOCs to push against cable **video** , likely by partnerships with satellite providers, Jacobs said. He concluded that cable will then need to pursue other forms

of revenue, like IP-delivered **phone** service, to fend off **video** competition. "AT&T did not go after TCI for its 17 million customers only," Jacobs...

...But for the time being, Cox and MediaOne fall squarely into the wired-HFC cable- **phone** camp, opting to pursue IP-delivered **phone** services later. Both said they are enjoying better-than-anticipated subscription rates for two-line...

...need to change how they handle the power portion of their networks, so that the **phone** stays **live** when the power fails. McElroy said Cox spends roughly \$30 per home passed to add...

...telephony, including the power supply, express cable to make sure that voltage travels to the **phone** box and a status monitor to detect outages. "We had people in the industry a year ago who felt that we'd never see double-digit (penetration) for **phone** service," McElroy said. "I think that we'll go well beyond that." Jacobs said two...

AB- <NV> NOVELTY - A service level agreement that defines user's desired level of support, is developed with the user. A **financial model** is constructed for the user, and necessary **financial advice** is provided to the user through computer coaching and/or **live** coaching, as determined by the service level.|

AB- <BASIC> DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) **Financial advisor** system;
- (2) **Financial model** generator;
- (3) Service level generator;
- (4) Coach computer system;
- (5) **Live** counselor system; and
- (6) **Financial counseling** providing program.

USE - For providing personalized **financial counseling** to users such as investors, online discount brokerage customers through Internet.

ADVANTAGE - Enables integration of automated coaching with **live** advising and hence allows users to obtain the benefits of **live** advisor's expertise and experience and the convenience and cost savings of automated coach. Enables users to receive customized **financial advice** tailored to his life intentions.

DESCRIPTION OF DRAWING(S) - The figure shows the architecture of financial management information system.

AB- <PN> WO 200284561 A1|
AB- <NV> NOVELTY - Process for interactive, collaborative group decision-making among multiple participants consists in specifying elements of a participant survey process, the elements each relating to spheres of influence objects to be used in a decision-making process, collecting survey response data for the survey elements from multiple participants using a survey process.|
AB- <BASIC> DETAILED DESCRIPTION - An automatic logic model process is specified for facilitating group decisions according to decision logic functions given the survey response data as inputs, automatically and continuously analyzing the survey response data to provide a compiled collaborative group decision reflecting changes to the survey response data on a **real time** basis, automatically and continuously identifying, collecting and compiling opportunities for action to improve organizational performance and automatically tracking changes and monitoring performance to provide guidance in managing the change process.
A **real - time** interactive display of results of the analyzing step is presented and the spheres of influence elements are selected from a group consisting of leadership, marketing, **strategy**, **finance**, operations, styles, structure, culture, development, staffing and customer elements and populated with data from a questionnaire.
INDEPENDENT CLAIMS are included for:
(1) A dynamic multidimensional array for representing information pertaining to measurement of **human** reasoning
(2) An apparatus for collecting and displaying **human** perception in the context of a **real time** dynamic model of a network of event nodes
(3) A graphic display object for showing proportional distribution

of responses in a survey data structure

(4) An apparatus to collect and display facts that support **human** perceptions in the context of a **real time** dynamic model of a network of event nodes

(5) A data processing apparatus

(6) An apparatus for collecting and displaying tasks for a **real time** dynamic model of a network of event nodes

(7) An apparatus for collection and display of knowledge assets

USE - Process is for interactive collaborative group decision making among multiple participants for networked client **browser** and application server computers.

ADVANTAGE - Process employs a constant basis and format for visual displays to bridge differences in the metrics or data on display originating from different sources and audiences. The visual format is simple and illustrative and can be used effectively by a variety of people after only a short period of training or exposure to the system. The common graphical format lends itself to implementation in a data structure format that can be stored, analyses, compiled, categorized and reviewed quickly and effectively across a number of different organizational areas or user criteria. The process uses computer industry standard products to run and is designed to pull information from various sources using conventions embedded in the object oriented software. The process uses the Internet and Web based architecture to enable delivery of up to the moment visual displays of the process to a set of users located at dispersed sites. This permits viewing of the collected information and generated reports for all decision-makers in a diverse organization, and allows the use of built in security and privacy of access features of such a system while addressing speed and scalability concerns. The process saves resources, guides thinking and acting, establishes a common frame of reference for members of an organization, supports creativity for individuals and groups and reflects rather than minimizes the unique qualities of the organization that make it unique. The process renders maps showing the interaction of the process properties in a uniform schematic representation so that patterns of collective reasoning and interactive collaborative group decision making can be detected.

DESCRIPTION OF DRAWING(S) - The figure shows implementation of an influence map used for data visualization.

 AB- <NV> NOVELTY - The **browser interface** displays a tool bar and a menu
 for presenting an application menu and a market data function menu.
 Among a pair of view windows, one view window presents information from
 application and market data function menus. Among the pair of view
 windows, one view window presents information with a **real - time**
 market data function and another view window with a financial
 application.|
 AB- <BASIC> DETAILED DESCRIPTION - The application menu provides client
 information application, management application, operation application,
 opportunities application, investment products application and support
 application. An INDEPENDENT CLAIM is also included for a network-based
 financial service system.
 USE - For providing financial services through internet. For use in
 accessing **real - time** market data to provide timely **financial**
advice . For use in incorporating **financial planning** application.
 For monitoring and assisting investor-mediated transactions in order to
 achieve predetermined financial goals. For use in maintaining
 application entitlements and preferences using internet access to host
 server, while moving between workstations at different locations.
 ADVANTAGE - Provides timely, proactive **financial advice** .
 Achieves **investment** goals based on **real - time** financial data and
 other finance related applications. Provides advanced technology with
 stable and fast operating environment, easy accessibility, usability
 and the flexibility of remote computing.
 DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
 network-based financial service system.

AB- <NV> NOVELTY - Data input by customer are collected by a profiler service (22). An optimizer subsystem (26) analyzes the data in profiler service and **financial advisor** service (1), to create proposed investment program. The interaction is managed by a contract management service (30). Payments are received based on a devised financial program through funds transfer service (10).|

AB- <BASIC> DETAILED DESCRIPTION - A **financial advisor** service (1) comprises of electronic database containing data regarding the investment characteristics, parameters of professional investment manager, and several investment products. A customer communicates with investor or advisor using public and private networks through an electronic network and delivery service (2) which has appropriate display and data representation. A profiler service (22) comprises of electronic database and applications necessary for interacting and collecting data relative to investment objectives of customer. A proposed investment program is created by an optimizer subsystem (26) comprising data repositories containing application software for retrieving, analyzing and matching the data in profiler service and **financial advisor** service. A policy generator subsystem (28) and a policy management subsystem have applications, database repositories and rules necessary to generate investment policies and manage such policies in an automated fashion. Interaction, negotiation, automated tracking and retention of all investment policies are managed by a

Search Report from Ginger D. Roberts

contract management service (30) which allows verifiable checking and non-repudiation of all interactions with system. Business rules and multifaceted set of generic translation technologies for translating from one to another using variety of transport mechanisms, are maintained by a translation subsystem (36). A record keeping system (38) comprises of applications, database, repositories, rules and electronic data feeds necessary to accurately track individual investments in a completely automated manner. A funds transfer service for the customer to initiate, implement, pay and receive payments from a devised financial program, along with the administrative functions necessary to ensure timely processing of such transactions, is provided. Automatic verification of proper purchase and allocation of securities to be included in the financial investment program selected by the customer, are implemented by a trading subsystem (34). Post investment knowledge of the status of the acquired investment program is provided by a performance subsystem (42). Integrity of the system is insured to prevent improper disclosure by a security subsystem (44). INDEPENDENT CLAIMS are also included for the following:

- (a) Financial investment program creation and modification method;
- (b) Automated system for financial transaction

USE - For creating, acquiring and monitoring portfolios of financial investments over a distributed computer network such as Internet.

ADVANTAGE - The customer obtains a cohesive, inclusive and multifaceted **investment plan** from a number of professional expert investment managers. The investor is allowed to monitor and update the chosen investment program in **real - time**.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of interactive computer implemented system.

AB- <NV> NOVELTY - An user is allowed to place securities orders with a
broker computer program while displaying and continuously updating
trading data on the graphical user **interface** display having several
windows.|

AB- <BASIC> DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for
the following:

(a) computer readable medium;

(b) computer system

USE - For electronically trading securities and for retrieving
financial information for stock market, **broker** trading program,
financial data, news and stock quotes.

ADVANTAGE - Automatically and continuously retrieves and displays
updated information that the investor needs for executing trades in a
way that is transparent to user. Provides **real time** portfolio
management and accounting.

AB- <BASIC> WO 9844444 A

The method for virtual **investment planning** and trading advice
involves constructing a virtual **investment adviser** from user
profiles. The user indicates directly or indirectly, a confidence level
that he or she desires for investments, as well as other constraints
e.g. tax status, trading costs etc. The virtual **investment adviser**
selects investments for a portfolio for that user, and simulates its
performance based on **actual** past performance data.

The user manipulates **interface** controls to evaluate returns from
target investments in terms of confidence and risk and probable
returns. If the user approves the results and his or her profile, the
selections are transmitted as orders to brokerage firms.

USE - Virtual **investment adviser** and support for individual
investors.

ADVANTAGE - System can be tailored to individual user preferences
and risk taking attitudes.

AB- <BASIC> WO 9408309 A

The virtual reality generator (4) has an input module (8) that receives financial information as input. The virtual reality generator outputs a virtual reality world generated from the financial information to a display device.

The financial information can be pre-processed by a financial analytic system prior to input to the virtual reality generator. The financial information can be received from a data file. The virtual reality generator can dynamically display and continuously update the virtual reality world.

ADVANTAGE - Allows money managers and **financial analysts** to easily view otherwise unmanageable amounts of complex information.

Dwg.1/11

AB- <US> US 5675746 A

A virtual reality generator to display pre-processed financial information as a virtual reality world, the virtual reality world being a three dimensional **interface** that enables a user to simulate movement through and interact with the financial information, the virtual reality generator comprising:

an input module receiving the pre-processed financial information from a financial analytic system, the financial analytic system generating the pre-processed financial information as a function of predetermined financial analytics on **real - time** and pre-stored financial data;

a user **interface** module having a first input for selecting a non-integer terrain parameter for each of a first axis of the three dimensional **interface** and a second axis of the three dimensional **interface**, a second input for selecting an axis display parameter for a third axis of the three dimensional **interface** and a third input for selecting at least one display parameter, the user **interface** module selecting a portion of the pre-processed financial information as a function of the non-integer terrain parameters and the axis display parameter; and

a virtual reality generator module coupled to the input module and the user **interface** module, the virtual reality generator generating and displaying on a display device the selected portion of the pre-processed financial information as the virtual reality world,

wherein the selected portion of the pre-processed financial information is displayed as a plurality of metaphors in the virtual

reality world, at least a subset of the plurality of metaphors being displayed and selected to rotate as a function of a predetermined one of the at least one display parameter, each metaphor in the subset being generated by the virtual reality generator module such that it rotates.

AB- PROBLEM TO BE SOLVED: To acquire a simple and efficient **interface** ,
etc., with a mutual fund by interfacing so that the **real time**
portfolio state of a collective investing means is transmitted to
from a collective investing means to a general customer. SOLUTION:
The interactive mutual fund 205 includes a mutual fund 200, an
investment advisor 215 of the fund and one or more customers 220i
to communicate with interactive mutual fund 205 through the
interface 225. **Real time** portfolio information is provided to
each general customer 220i through a route 235i by the interactive
mutual fund 205. The **real time** portfolio information is formed by
combining a complete list of balance of securities, cash, etc., owned
by the mutual fund 205, the transaction activities of the mutual fund
205 and other performance information usable only by the **investment**
advisor of the fund. COPYRIGHT: (C)2000,JPO

English Abstract

A method is disclosed for providing financial functions by an agent for each of a plurality of clients. One embodiment includes, relating to a financial function of each client, demonstrating that more than one activity of the agent and of one or more subagents can be transparent to the client, receiving financial information at the agent, creating risk management information relating to the financial information, analyzing the risk management information in the context of the financial information, determining an action based on the analysis, facilitating implementation of an action on behalf of the client, and communicating with the client one or more activities of the agent and the one or more subagents.

French Abstract

L'invention concerne un procede permettant a un agent de fournir des fonctions financieres a chacun de ses nombreux clients. Un mode de realisation, se rapportant a une fonction financiere de chaque client, consiste a demontrer qu'au moins une activite de l'agent et d'au moins un sous-agent peut etre transparente pour le client; a recevoir des informations financieres chez l'agent; a creer des informations en matiere de gestion des risques liees aux informations financieres; a analyser les informations en matiere de gestion des risques dans le contexte des informations financieres; a determiner une mesure fondee sur l'analyse; a faciliter la mise en oeuvre d'une mesure pour le compte du client; et a communiquer avec le client sur au moins une activite de l'agent et d'au moins un sous-agent.

French Abstract

Cette invention concerne une interface graphique utilisateur s'utilisant dans le cadre d'un systeme et d'une technique de planification et de gestion financieres. Ce modele comprend un module de modelisation des intentions de l'utilisateur et un module de planification des investissements. Une interface utilisateur graphique permet d'afficher simultanement un modele et un grand nombre des caracteristiques dudit modele, ce qui permet a l'utilisateur de manipuler ce modele de facon interactive au moyen des divers icones de fonctions et de modes. L'utilisateur a en outre la possibilite, via l'interface, d'entrer en contact avec un conseiller reel et d'accéder a un pilote automatise au moyen d'une ou de plusieurs icones de communication.

On decrit un systeme integre de fourniture de services financiers qui comprend au moins un poste de travail equipe d'une unite centrale de traitement et un ecran d'affichage video ; au moins un serveur hote ; un systeme de communication qui transmet des informations entre un poste de travail et le ou les serveurs hotes ; et une interface d'application pouvant fonctionner sur le poste de travail pour acceder a au moins une application logicielle liee au domaine de la finance. Un poste de travail pouvant fonctionner avec le systeme est egalement presente. Le systeme offre des conseils proactifs actualises. Les investisseurs ont ainsi l'opportunit  de definir et d'atteindre des objectifs d'investissement sur la base de donnees financieres en temps reel et la possibilite d'acceder a des calculateurs financiers. L'invention concerne egalement un systeme d'authentification comprenant un mecanisme au moyen duquel un utilisateur peut evoluer entre divers postes de travail et conserver tous les attributs de son propre ordinateur, c'est-a-dire le droit a des applications et les preferences de l'utilisateur.

French Abstract

L'invention concerne un systeme de gestion financiere servant a fournir des conseils financiers personnalises a un utilisateur. Le systeme fonctionne dans un environnement d'informatique cooperative entre l'utilisateur et un conseiller financier, et comporte un sous-systeme de service et un sous-systeme de production de conseils. Le sous-systeme de service permet a l'utilisateur de negocier un accord de service qui definit le niveau d'assistance voulu par l'utilisateur et limite l'accès de ce dernier aux informations. Le sous-systeme de production de conseils est couple au sous-systeme de service et comprend un ou plusieurs moteurs d'assistance qui analysent de maniere dynamique les besoins financiers de l'utilisateur en fonction de l'accord de niveau de service de celui-ci. De plus, le moteur d'assistance fournit des conseils financiers personnalises en fonction des intentions de l'utilisateur a long terme. L'invention concerne aussi un sous-systeme de gestion de portefeuille financier permettant a l'utilisateur de modeliser les effets produits par l'ajout ou la suppression de diverses valeurs mobilières, et de l'aider a mieux adapter son portefeuille au niveau de tolerance de risque et a son style d'investissement. Le systeme offre un soutien au conseiller en lui fournissant une assistance automatisee qui permet d'attirer l'attention de l'utilisateur et du conseiller directement sur les zones soulevant des problemes.

French Abstract

La presente invention concerne un systeme de modelisation des risques lies aux portefeuilles financiers. Ce systeme fonctionne dans un environnement informatique cooperatif entre l'utilisateur et le systeme de developpement de portefeuilles. Le systeme de creation de portefeuilles modelise les parametres d'investissement personnel de l'utilisateur selon un profil d'utilisateur en terme de niveau de tolerance du risque de l'utilisateur, du type d'investissement de l'utilisateur et de l'attitude haussiere/baissiere de l'utilisateur. De plus, ce systeme calcule les valeurs VAR (valeurs exposees au risque) pour l'utilisateur. Le systeme filtre les titres varies sur la base de leurs valeurs VAR et Beta et presente deux listes de titres filtres, avec les valeurs Beta opposees, correspondant au profil de l'utilisateur. En outre, cette invention permet a l'utilisateur d'echanger des titres a l'interieur et a l'exterieur de son portefeuille existant et de recevoir et d'analyser l'effet de l'echange sur son portefeuille. Le modele cree egalement un portefeuille ideal a partir du profil de l'utilisateur. Par ailleurs, cette invention presente a l'utilisateur une valeur estimee de son portefeuille, a partir d'une formule de regression ainsi que le meilleur ou le pire des scenarios a partir de formules statistiques.

English Abstract

The present invention provides investment advice systems. One version of the present invention provides investment advice systems that allow a user to select one or more advisors from a list of investment advisors. According to this version of the invention, the end user can receive advice on a particular transaction either separately from each investment advisor or in consensus. The system offers advice in part on the user's portfolio, tax position and risk profile and in part on the advisors evaluation of current market conditions. Thus, when a user is considering making a transaction, the user can obtain advice that can take into portfolio information including a user's proposed transaction and/or user portfolio information. A user armed with the above-described customized advice can execute a specific transaction and have their portfolio updated to reflect execution of that (those) order(s). In an alternative embodiment, a user's desire to buy or sell a security and/or a need for rebalancing a user's portfolio can generate transaction(s). As a result, the system will generate a buy/sell list (including recommended alternatives) from which a user can select.

French Abstract

La presente invention concerne des systemes de conseil en matiere d'investissements. Une premiere version de cette invention fournit des systemes de conseils en investissements qui permettent a l'utilisateur de selectionner un ou plusieurs conseillers dans une liste de conseillers en investissements. Selon cette version, l'utilisateur final peut recevoir des conseils sur une transaction particuliere de la part d'un des conseillers, soit de maniere individuelle soit en accord avec les autres conseillers. Ce systeme offre des conseils en partie sur le portefeuille, la situation fiscale, et le profil des risques de l'utilisateur, et en partie sur l'evaluation des conseillers de la situation actuelle du marche. Ainsi, lorsqu'un utilisateur envisage d'effectuer une transaction, il peut obtenir des conseils, par exemple des informations de portefeuille telles qu'une transaction d'utilisateur proposee et/ou des informations de portefeuille d'utilisateur. Grace a ce dispositif personnalise, l'utilisateur peut executer une transaction specifique et son portefeuille peut etre mis a jour afin de reflechir l'execution de son/ses ordre(s). Dans une variante, le desir d'un utilisateur d'acheter ou de vendre un titre et/ou le besoin de reequilibrer le portefeuille d'un utilisateur peuvent creer une/des transaction(s). Ainsi, le systeme creera une liste d'achats/ventes (comprenant les options recommandees) a partir de laquelle l'utilisateur peut faire son choix.

INVESTMENT ADVICE SYSTEMS AND METHODS

Copyri2ht Notice

Contained herein is material that is subject to copyright protection...

...all rights to the copyright whatsoever.

Back2round

This invention relates generally to the field of **investment advice** systems and more specifically to **investment advice** systems and methods that allow a user to receive advice over a network, e.g., the Internet. In the past few years, the retail brokerage and **financial analyst** industries have developed a number of electronic systems accessible over the Internet to provide users, e.g., investors with **investment advice**. The term "user" as used herein encompasses both an individual investor and that investor's representative(s) such as a **financial planner**. Some of the recently developed electronic systems perform mathematical calculations to provide advice regarding a variety of investment decisions, such as mortgage refinancing, loan amortization, and retirement **planning**. However, these **financial advice** systems typically are limited in several ways. To the extent that these electronic services provide...

...many users. In other words, there are at least the following three drawbacks to existing **financial advice** systems: 1) only a fraction of investors are receiving **investment advice**; 2) those currently receiving **investment advice** receive advice that is incomplete, inconsistent and/or not timely; and 3) mutual funds and broker/planners ...

...advice, mutual funds charge a management fee and are managed without regard to tax consequences. **Brokers** or **financial planners** often know only a portion of products available and sometimes give inconsistent **advice**. Further, online **financial** services and products tend to be security specific and do not take into account the...

...tax position as noted above. With respect to the third point, Forrester Research in "Overhauling **Financial Advice**" February 2000, incorporated herein by reference in its entirety, estimates that approximately twenty million households...

...would soon qualify for long-term capital gains status. Thus, a need remains for an **investment advice** system that provides clear, easy-to-comprehend advice, customized to the user as to that user...

...portfolio and/or considering making a transaction. In other words, a need exists for an **investment advice** system that provides effective advice at the point of sale, i.e., when the user is capable of making a financial transaction. Further, a need exists for an **investment advice** system that allows a user access to more than one opinion on a particular potential...to select advisors from a group of advisors. In addition, a need exists for an **investment advice** system that allows a user to obtain a consensus, i.e., the pooled or combined...

...s portfolio.

Summary of the Invention

The present invention provides systems and methods for providing **investment advice**. The systems and methods of the present invention are particularly suited to network-based **investment advice** services that provide **investment advice** and manage securities portfolios for clients, such as individual investors or **financial planners**, over a computer network, such as the Internet.

In accordance with one embodiment of the present invention, a system for implementing an **investment advice** service may include a server computer hosting an **investment advice** service accessible via client computers to a plurality of clients and a database operably coupled...

...plurality of securities portfolios and may maintain portfolio information associated with the security portfolios. The **investment advice** service preferably includes a user **interface** including controls

whereby a client can access portfolio information concerning a securities portfolio

3

identified by the database. The **investment advice** service is preferably available via a computer network to assist a client in managing a securities portfolio identified by the database. The **investment advice** service may include a trade advisor component hosted by the server computer and operatively coupled...

...The terms "client" and "clients" as used herein may refer to an individual investor, a **financial planner** or **financial** institution that may manage one or more securities portfolios, or any other person, business, or entity that may transact with an **investment advice** system to receive **investment advice** and/or portfolio management services. In accordance with an additional aspect of the present invention, the **investment advice** service may include a security ranking aggregator component hosted by a server computer and operably...

...information for the securities portfolio. In accordance with another aspect of the present invention, the **investment advice** service may include a broker connection aggregator hosted by a server computer and operably connected to the trade advisor component. The broker connection aggregator preferably has a broker **interface** for communicating with a plurality of brokers over the

4

computer network. The broker **interface** allows a client to execute securities transactions with one of the plurality of **brokers** through the **investment advice** service. In accordance with a further aspect of the present invention, the **investment advice** service includes a portfolio tracker component hosted by a server computer and operably coupled to the database. The portfolio tracker component preferably has a portfolio **interface** for receiving portfolio information concerning a securities portfolio from a client and is preferably operative to **interface** with the database to maintain the portfolio information in a securities portfolio identified by the...

...portfolio. In accordance with one embodiment of the invention, a computer-implemented method for providing **investment advice** to a client over a computer network includes providing access over a computer network to...establishing a benchmark for the portfolio based on the risk information. The method for providing **investment advice** to a client over a computer network can be implemented as a set of processing...

...one embodiment of the invention. FIG. 2A is a business use case diagram for the **investment advice** system of FIG. 1. FIG. 2B is a general use case diagram for the **investment advice** system embodiment of FIG. 1. FIG. 3A is a sequence diagram for one embodiment of...

...case of FIG. 2B. FIG. 4 shows one embodiment of the system layers for the **investment advice** system of FIG. 1. FIG. 5 is a diagram illustrating the data flow between the...

...6 is a diagram illustrating the data flow of portfolio information to and from the **investment advice** system of FIG. 1. FIG. 7 is a diagram illustrating the breakdown of a portfolio into tax-lots for use by the **investment advice** system of FIG. 1. FIG. 8A-8H are diagrams illustrating the long and medium term information used by the **investment advice** system of FIG. 1. FIG. 9 is a system map for one embodiment of the **investment advice** system of FIG. 1. FIG. 10 shows one embodiment of the "my accounts" screen of...

...the present invention.

7

FIG. 18 shows another embodiment of a system map for the **investment advice** system of FIGS. 1. FIG. 19 is a block diagram showing a computer system for...on each factor set. Specifically, the system minimizes the weighted variance of the factors and **actual** returns. In one embodiment, the system can impose some restrictions on individual factor weights (for ...analysis of Use Cases.

Design View

The design view of a system encompasses the classes, **interfaces**, and collaborations that form the vocabulary of the problem and its solution. This view primarily...

...system architecture utilizes Class Diagrams, Class-ResponsibilityCollaboration Cards (CRC Cards) to express class relationships and **interface** definitions. Where appropriate, a developer can develop similar Class Diagrams using a Visual Modeling tool...

English Abstract

A system and method for determining an optimum investment portofolio includes a computerized data processing system that is linked to one or more databases where data on various financial investments is obtained, annotated, weighted and evaluated for use by a simulation program for

Search Report from Ginger D. Roberts

selection of risk appropriateness based on user input. Once a user inputs a goal, at a given horizon, the current investment portofolio, if any, data on risk tolerance, and various investments are selected, future returns simulated, and combined to propose a mix of investments reasonably believed to meet the goal at the horizon.

French Abstract

Cette invention concerne un systeme et une methode permettant de definir un portefeuille de titres optimum et comprenant un systeme de traitement informatise de donnees relie a une ou a plusieurs banques de donnees. Ces bases permettent d'obtenir, d'annoter, de ponderer et d'evaluer des donnees sur divers investissements financiers au moyen d'un programme de simulation servant a soupeser le bien-fonde de risques compte tenu des desiderata de l'utilisateur. Une fois que l'utilisateur a precise ses objectifs, communique la valeur de son portefeuille de titres actuel, si portefeuille il y a et fourni des informations sur sa tolerance aux risques, on selectionne divers investissements et leurs rentabilite future que l'on combine pour proposer un mix d'investissements devant raisonnablement permettre d'atteindre l'objectif recherche a l'horizon choisi.

...clients?"

On the cusp of a new century, most practitioners and industry experts agree that **financial planning** offices need to invest in technology. "I think the successful planners and advisers spend a lot of money on technology," says Carol Grosvenor, a Los Angeles-based consultant in the **financial planning** industry, who helps her clients evaluate and acquire new software.

How does one pick these...

...Selecting from among the more significant or comprehensive types of software such as portfolio management and **financial planning** packages is a major decision with significant consequences for how an office functions. In the area...

...Support's dbCAMS+, Captools, and E-Z Data's Client Data System. Among the popular **financial planning** packages are ExecPlan from Sawhney Systems, Mobius Group's Leonard 2000 and Lumen Systems' **Financial Planning** Professional. Of course, there are many others, and new products on the horizon, highlighting the...

...sound rather disgruntled when discussing their experiences. Two years ago, Barbara Hartigan, vice president of **financial planning** at Allmerica **Financial** in Worcester, Mass., began investigating every available **financial planning** package she could find. "I swear I looked at them all," she says. She examined...

...with Sharkey, Howes, Wagner & Javer in Denver, is a frequent operations and management consultant to **financial planning** and **investment advisory** firms. He paints a rather bleak picture of available software options for practitioners. "This is...

...face a lack of centralized information about products. There are few technology experts in the **financial planning** realm, and apparently no one out there is writing and selling research reports that analyze... Unfortunately, I think something like that would not be used very much," says Petote, a **planner** with Allegiance **Financial Advisers** in Pittsburgh. "Most people in this business tend to be incredibly cheap." He adds, "It...

...everything themselves, that I really doubt that anyone could stay in business doing that."

Still, **Financial Planning** succeeded in tracking down a few consultants, and they appear to be thoroughly employed. Grosvenor...

...of Condor Capital Management in Martinsville, N.J., uses his study group, "Council of Independent **Financial Advisers**," as a forum where he and his five peers share ideas and experiences on technology...well for us," says Schapiro.

AdviserWorks (www.adviserworks.com), a password-protected Web site for **investment advisers**, offers access to a community of professionals with plenty of opinions. And don't forget the software discussion at www.**financial - planning .com**, the home of **Financial Planning Interactive**.

Not All Roads Lead to Advent

In the area of portfolio management, the software...what they have. Money on training, for instance, is money well spent, she says.

Selecting **Financial Planning Software**

A basic tenet of software investments, according to Grosvenor, is that you get what you pay for. "If you buy a \$200 **financial planning** software," she says, "you're going to get way less than if you bought a...

...automatically spring for the high-end option. Grosvenor explains, "If you're not doing comprehensive **financial planning** and you don't want your software to **interface** with something if you're doing just simple, quick analyses then a \$200 piece of software could suit your needs."

To help his clients pick the appropriate **financial planning** software, Howes queries them on whether they will be offering planning (invariably the answer is "yes," he says), and if so, to what degree. In terms of sheer volume, **financial planning** ranges from only three pages to notebooks' worth, says Howes, who manifests a clear preference for brevity.

"In my career I've written 300 **financial plans** from scratch," says Howes, "and the most complicated **financial plans** I've ever done, and we've done some dillies, basically answer about three questions...

...view.

Howes divides the business into two factions: the people who buy software packages for **financial plans**, and those who do their own. He believes the latter group is larger, and says...

...that wants to have some uniformity and some[thing] idiotproof."

To chart a client's **financial planning** software course, Howes determines how much in terms of resources the client is going to devote to **financial planning**. "If you're not going to commit energy and resources

to write **financial plans**, buy a package," says Howes for instance, something "colorful and cheerful" like Financial Profiles. He also...

...their technical training and planning isn't good," he says.

For others, Howes has different **advice**. "If [**financial planning**] is really the heart of your work, that you pour a lot of relationship into... that it was very unprofitable, especially in his Pittsburgh area, to sustain a business on **financial plans** alone. "You have to have some other aspects of what you're doing there. What...

...projected balance sheets. I can't think of anything more conceptually worthless to a regular **human** being than a projected balance sheet."

Mobius, he says, is "fine for [people] that really like to sell it by the pound." He continues: "The problem with all of the **financial planning** packages is they're written by someone or something that has a bias. Most of...a challenge: "I think the software company that can truly integrate the functions in a **financial planning** office and provide any semblance of customer service will quickly attain a very large share...

...management front, June arrival Portfolio 2000 is catching quite a few second glances. In the **financial planning** software market, NaviPlan Extended was also scheduled for release in June, with Sycomex' Syrius (still...

...and promising, for a hefty fee, to help close the gap between portfolio management and **financial planning** functions.

Carol Grosvenor, who runs a Los Angeles-based consulting practice, The Grosvenor Company, notes...

...sophisticated, cash-flow driven product.

"The NaviPlan Extended program is a very high-end, integrated **financial planning** software tool," says Drew Abbott, director of sales and marketing. He acknowledges data integration for example...

...leading portfolio management systems," he says.

At Allmerica Financial in Worcester, Mass., vice president of **financial planning** Barbara Hartigan praises NaviPlan Extended. "It's really integrated," says Hartigan, "and we're hoping...the software for evaluation.

Some of Syrius' ambitious goals are to bridge the gap between **financial planning** and portfolio management, cope with tax codes and currencies of multiple countries, and manage the...

...A product description is available at the company's Web site (www.techfi.com).

Certified **Financial Planner** licensee and management consultant Lawrence Howes of Denver enthuses, "They have the first true open...

...like Advent, or they use one that's dying, like FoxPro or dbCAMS+"

Portfolio 2000 **interfaces** with most major custodians, and also includes conversion wizards for most popular portfolio management packages...a securities attorney and compliance consultant, I have grown accustomed over the years to advising **financial planners** and registered **investment advisers** on a variety of compliance related issues. In that the basic underpinning of proper compliance...

...referred to as SLAB No. 5), we have known that the SEC, which regards registered **investment advisers** as fiduciaries, takes the position that Y2K problems must be communicated to clients and prospective clients. The SEC ruling states that in any situation in which the **investment advisory** firm, upon assessment of internal infrastructure, concludes that the Y2K problem will be ...too, must be communicated to clients and prospects.

Search Report from Ginger D. Roberts

In all of my dealings with the **financial planning** community, I have yet to hear of any firm that falls into either of these...

...ramifications.

Communications to vendors, suppliers, broker-dealers, transfer agents and custodians. By this point, all **planners** and **investment advisers** should have communicated extensively with suppliers and vendors to make sure that such outside providers...suggesting that it be ignored. To be sure, clients who utilize the services of a **financial planner** tend to be more affluent and more sophisticated and as such are more cognizant and in many cases more concerned about the implications of Y2K than is the population at large. A **financial planner** is often called upon to wear many hats and to advise clients about a multiplicity...

...on Y2K issues. Among other things, the memo said such things as "We at XYZ **Financial Planners** wanted you to know that come January 1, 2000, we can guarantee you that we..."

...in the new millennium.

The other tricky Y2K-related issue deals with the provision of **investment advice**. This is an individual, firm-by-firm decision, but the planner does need to be

...everything themselves, that I really doubt that anyone could stay in business doing that."

Still, **Financial Planning** succeeded in tracking down a few consultants, and they appear to be thoroughly employed. Grosvenor...

...of Condor Capital Management in Martinsville, N.J., uses his study group, "Council of Independent **Financial Advisers**," as a forum where he and his five peers share ideas and experiences on technology...well for us," says Schapiro.

AdviserWorks (www.adviserworks.com), a password-protected Web site for **investment advisers**, offers access to a community of professionals with plenty of opinions. And don't forget the software discussion at **financial - planning .com**, the home of **Financial Planning Interactive**.

Not All Roads Lead to Advent

In the area of portfolio management, the software...what they have. Money on training, for instance, is money well spent, she says.

Selecting **Financial Planning** Software

A basic tenet of software investments, according to Grosvenor, is that you get what you pay for. "If you buy a \$200 **financial planning** software," she says, "you're going to get way less than if you bought a...

...automatically spring for the high-end option. Grosvenor explains, "If you're not doing comprehensive **financial planning** and you don't want your software to **interface** with something if you're doing just simple, quick analyses then a \$200 piece of software could suit your needs."

To help his clients pick the appropriate **financial planning** software, Howes queries them on whether they will be offering planning (invariably the answer is "yes," he says), and if so, to what degree. In terms of sheer volume, **financial planning** ranges from only three pages to notebooks' worth, says Howes, who manifests a clear preference for brevity.

"In my career I've written 300 **financial plans** from scratch," says Howes, "and the most complicated **financial plans** I've ever done, and we've done some dillies, basically answer about three questions...

...view.

Howes divides the business into two factions: the people who buy software packages for **financial plans**, and those who do their own. He believes the latter group is larger, and says...

...that wants to have some uniformity and some[thing] idiotproof."

To chart a client's **financial planning** software course, Howes determines how much in terms of resources the client is going to devote to **financial planning**. "If you're not going to commit energy and resources to write **financial plans**, buy a package," says Howes for instance, something "colorful and cheerful" like Financial Profiles. He also...

...their technical training and planning isn't good," he says.

For others, Howes has different **advice**. "If [**financial planning**] is

really the heart of your work, that you pour a lot of relationship into... that it was very unprofitable, especially in his Pittsburgh area, to sustain a business on **financial plans** alone. "You have to have some other aspects of what you're doing there. What...

...projected balance sheets. I can't think of anything more conceptually worthless to a regular **human** being than a projected balance sheet."

Mobius, he says, is "fine for [people] that really like to sell it by the pound." He continues: "The problem with all of the **financial planning** packages is they're written by someone or something that has a bias. Most of...a challenge: "I think the software company that can truly integrate the functions in a **financial planning** office and provide any semblance of customer service will quickly attain a very large share...

...management front, June arrival Portfolio 2000 is catching quite a few second glances. In the **financial planning** software market, NaviPlan Extended was also scheduled for release in June, with Sycomex' Syrius (still...

...and promising, for a hefty fee, to help close the gap between portfolio management and **financial planning** functions.

Carol Grosvenor, who runs a Los Angeles-based consulting practice, The Grosvenor Company, notes...

...sophisticated, cash-flow driven product.

"The NaviPlan Extended program is a very high-end, integrated **financial planning** software tool," says Drew Abbott, director of sales and marketing. He acknowledges data integration for example...

...leading portfolio management systems," he says.

At Allmerica Financial in Worcester, Mass., vice president of **financial planning** Barbara Hartigan praises NaviPlan Extended. "It's really integrated," says Hartigan, "and we're hoping...the software for evaluation.

Some of Syrius' ambitious goals are to bridge the gap between **financial planning** and portfolio management, cope with tax codes and currencies of multiple countries, and manage the...

...A product description is available at the company's Web site (www.techfi.com).

Certified **Financial Planner** licensee and management consultant Lawrence Howes of Denver enthuses, "They have the first true open...

...like Advent, or they use one that's dying, like FoxPro or dbCAMS+"

Portfolio 2000 **interfaces** with most major custodians, and also includes conversion wizards for most popular portfolio management packages...a securities attorney and compliance consultant, I have grown accustomed over the years to advising **financial planners** and registered **investment advisers** on a variety of compliance related issues. In that the basic underpinning of proper compliance...

...referred to as SLAB No. 5), we have known that the SEC, which regards registered **investment advisers** as fiduciaries, takes the position that Y2K problems must be communicated to clients and prospective clients. The SEC ruling states that in any situation in which the **investment advisory** firm, upon assessment of internal infrastructure, concludes that the Y2K problem will be ...too, must be communicated to clients and prospects.

In all of my dealings with the **financial planning** community, I have yet to hear of any firm that falls into either of these...

...ramifications.

Communications to vendors, suppliers, broker-dealers, transfer agents and

...annual gains of 16% for the next decade. If that's the case, how should **financial planners** and their clients participate?

Dent says mutual funds are the best vehicle for most investors...to work in such small towns, keeping in touch electronically, will he also search for **financial advice** over the Internet? Will planners become obsolete? "Not at all," Dent says. "The baby boomers are used to relying upon experts for advice. They'll want **financial planners** to help them make sense out of all the information out there."

The key for successful **financial planning** in the future, according to Dent, is the adoption of a "**browser** -server" model. "End-users can directly access, or browse, for specialized information that is available ...

...That's how computer networks are organized, for maximum efficiency, and that's the direction **human** organizations need to take.

In terms of financial services, Dents sees successful planners becoming "**human browsers** ." They will specialize in a specific segment of the population, such as business owners, divorced...

...as being objective as well as knowledgeable about their particular concerns.

The planner, acting as **browser** , must filter through all the choices that are out there and provide each client with a few high-quality options that meet their needs. As Dent puts it, "The **financial adviser** 's job is to simplify a complex world and customize solutions for busy clients who...

...financial-investment experts themselves."

In the financial service firm of the future that Dent envisions, **investment analysts** , insurance policies, mutual funds, tax experts and economic forecasters will become the servers, offering an array of financial options that **browsers** can select. The **browsers** will be the **financial advisers** , bringing the best options to their clients.

According to Dent, financial-service companies such as...

...asset allocation, tax and estate planning and economic forecasting-all to support the front-line **browsers** who work with clients.

To prepare for this future, Dent says, **financial planners** should decide which market segment they wish to serve and specialize there. "Focus on the...who have grown up with computers. Computer products and services will become mainstream consumer items; **financial planning** clients will feel comfortable communicating electronically.

"Instead of making an appointment weeks ahead and traveling to an office for a meeting, clients will be able to contact **advisers** -including **financial planners** -via the Internet," Dent says. "Planners who want to communicate with their client base will...

...upbeat, as the title of his new book indicates. "How and where we work and **live** is about to change more than at any time in our history," he declares. "There..."

Abstract: When an individual engages in a **video** -mediated interaction with a stranger, it is known that they are likely to be more interactive if the image of their partner appears very close (zoomed in). An experiment was run to investigate whether or not this difference in conversational style had any subsequent effect on individuals understanding of the topics discussed. Participants discussed **financial advice** with a remote **financial advisor** who appeared either close or far away. After discussing 4 investment options, participants stated which they would choose. After the experiment, a surprise recall interview was used to measure participants understanding a trend towards participants being more interactive in the zoomed in conditions. When split into groups of interactivity, results clearly showed that participants who were more interactive had a significantly greater understanding of the options discussed. It is concluded that being more interactive in a conversation leads to better understanding, when using **video** -mediated technology is to alter the zoom on a camera so that the information giver appears closer than usual. Abstract: This paper presents an extended goal programming methodology to address the problem of capital budgeting under uncertainty to overcome the defects of chance-constrained capital budgeting models. In particular, since **financial planners** frequently deal with the complex problem of capital budgeting by aggregating large numbers of small investment proposals into families of large projects, the paper presents necessary and sufficient conditions for the acceptance of a set of investment projects by

Search Report from Ginger D. Roberts

a business enterprise. The results indicate that under uncertainty, firms faced with capital rationing are less economically efficient than those non-capital rationing firms. Also, the results show that optimal allocation policy under uncertainty requires the **actual** discount rate to be greater than the market cost of capital, a finding which is consistent with corporate finance practice. Abstract: The aim of this research is to create a validated descriptive model of decision-making in insolvency (DMI). The decisions made by insolvency practitioners are complex by nature. An insolvency practitioner is often faced with numerous factors in attempting to determine whether to liquidate or trade-on a company in financial distress. The four main types of literature on corporate financial distress are discussed briefly to provide a background to the current project. In the context of the very sparse literature on insolvency decisions, there is little hope of attempting to find a model that improves on existing practice. Instead, we focus on modeling **human** DMI. To model **human** DMI, we need to know the processes that occur in the minds of **human** experts. We consider a number of methods for discovering and recording the processes in the **human** mind, and argue that weighted-additive methods are suitable for modeling DMI judgments. The DMI **model** of **financial** and business **agents** is described in an object-oriented hierarchy and illustrated with a case study of the modeling of a judgment. In parallel with the development of the DMI model, we are using KADS (Knowledge Acquisition and Documentation System) to describe formally a conceptual model compatible with the implementation in the expert system shell NEXPERT. The resulting expert system is used to validate the DMI model. (39 Refs)

Abstract: We outline a spreadsheet-based system for visualization of **real - time** financial information. Our system permits the user to define arithmetic and presentation relationships amongst the various cells of the spreadsheet. The cells contain primitives that can be numbers, text, images, functions and graphics. Presenting financial information in this format allows its intended clients, the **financial analysts**, to work in the familiar environment of a spreadsheet and allows them the flexibility afforded by the powerful **interface** of the spreadsheet paradigm. In addition, our system permits **real - time** visualization of the financial data stream allowing its user to visually trade the changing market trends in two and three dimensions. (11 Refs)

Title: **Cornering customer contact [banking services; multimedia applications]**

Journal: AV Magazine for Business Communications no.294 p.16-17

Publisher: Emap Media,

Publication Date: June 1996 Country of Publication: UK

CODEN: AVMAFA

Material Identity Number: E362-96009

Language: English Document Type: Journal Paper (JP)

Treatment: Practical (P)

Abstract: Banks face stiff competition from other **financial** services outlets. **Strategic** use of multimedia techniques, and changes in production aims, could help them keep their customers share dealing and information service and has embedded **videoconferencing** links to allow Barclays Stockbrokers' dealers, based in Glasgow, to give help and advice. Technical features of the installation in four branches (two in the City, one in Crawley and one in Maidstone) include full-screen, full- **motion video** (used to show an optional introductory **video**), ISDN links for financial transfers and **videoconferencing**, a **live** data link updating share prices and a specially designed (but potentially generic) **interface** by consultancy PDP and researched in conjunction with the National Physical Laboratory. As well as allowing registration for, and dealing through, three different Barclays schemes, the prototype will help identify which other services customers would like in the future-such as a taxation service, wills, unit trusts, portfolio management, and insurance. 'We made it an end-to-end process so that we can capture the sale,' says Anwer Shah,

Language: English Document Type: Journal Paper (JP)

Treatment: Practical (P)

Abstract: The directness, immediacy, and simplicity of visual programming languages are appealing. The question is, can VPLs be effectively applied to large scale programming problems while retaining these characteristics. In scaling up, the problem is how to expand applicability without sacrificing the goals of better logic expression and understanding. From a size standpoint, scaling up refers to the programmer's ability to apply VPLs in larger programs. Such programs range from those requiring several days' work by a single programmer to programs requiring months of work, large programming teams, and large data structures. From a problem domain standpoint, scaling up refers to suitability for many kinds of problems. These range from visual application domains-such as user **interface** design or scientific visualization-to general purpose programming in such diverse areas as **financial planning**, simulations, and **real time** applications with explicit timing requirements. To illustrate the scaling up problem, we discuss nine major subproblems and describe emerging solutions from existing VPL systems. First, we examine representation issues, including static representation, screen real estate, and documentation. Next, we examine programming language issues-procedural abstraction, interactive visual data abstraction, type checking, persistence, and efficiency. Finally, we look at issues beyond the coding process. (12 Refs)

Treatment: Practical (P); Product Review (R)

Abstract: The use of neural nets for forecasting and modelling has

aroused considerable interest. 4Thought is a computer package which is aimed at the business user and can be used on a PC, preferably a fast 386 or 486 machine with a co-processor. 4Thought is menu driven and operates in a windows environment. It comes with a manual and contains a number of worked examples. The authors first describe the neural net models which it uses, i.e. multilayer perceptrons, and explain how these are related to standard statistical procedures. They then discuss their experience with modelling and forecasting some **real time** series. They examine how useful 4Thought is as a program for modelling neural nets, and how effective neural nets (at least as implemented in 4Thought) are for **modelling** economic and **financial** time series. Abstract: Advising someone seems easy to do but, like any **human** behavior, advice-giving requires numerous and elaborate mechanisms. The advice-giver must have a good understanding of the needs of the user, be able to solve the problem or answer the request of the user, and finally to explain the presented solution. In ESPRIT project ESTEAM-316, the authors developed an advice-giving system for financial investment. They give an overview of the entire project and a more detailed presentation of the dialogue management component. They put particular emphasis on the data structures used and on the use of planning mechanisms in conducting the dialogue. (13 Refs)

Abstract: n-Vision is a testbed for exploring n-dimensional worlds containing functions of an arbitrary number of variables. Although their interaction devices and display hardware are inherently 3D, the authors demonstrate how they can be used to support interaction with these higher-dimensional objects. They introduce a new interaction metaphor developed for the system, which they call 'worlds within worlds': nested heterogeneous coordinate systems that allow the user to view and manipulate functions. Objects in their world may be explored with a set of tools. They describe an example n-Vision application in 'financial visualization,' where the functions are **models of financial** instruments. n-Vision's software architecture supports a hierarchy of arbitrarily transformed, nested boxes that defines an interactive space within which information is displayed and input obtained. The design, modeled in part after the hierarchical 2D windows of the X Window System, is intended to provide an environment that is well suited to the use of true 3D input and stereo display devices. Boxes are associated with event handlers that support 3D **motion**, enter, and leave events, and provide recognition of finger gestures. (23 Refs)

Abstract: The following advanced interaction media are discussed and described: hypertext, multimedia and virtual environments. Hypertext is also called non-linear text. The concept of hypertext is quite simple: windows on the screen are associated with objects in a database, and links are provided between these objects, both graphically and in the database. Applications of hypertext systems include electronic publishing, online technical manuals, online instruction manuals, online help for other software, project management, issue analysis, online policy manuals, group presentations via large screen projectors, **financial modeling** and user **interfaces**. Multimedia provides connections between various information media such as text, graphics, images, sounds, voice, simulations, etc. Four applications of multimedia can be distinguished: interactive documentaries, learning environments, **video** data analysis, and multimedia communication. The main goal of virtual environments is to represent reality using appropriate technological media. This representation should take into account as closely as possible the **human** cognitive and sensory capabilities to better capture and reproduce the look and feel of the real world it represents. A virtual environment can be defined as a multi-sensory simulation which can mix visual displays, sounds, relative **motion**, vibrations, chemical smells, and wind simulation. (46 Refs)

Abstract: Executive information systems (EISs) are branching out. From sophisticated decision-support **models** to **financial** spreadsheets to on-line text retrieval, the latest wave of EIS products are seeking out **real - time** data wherever it resides, filtering it, and presenting it to managers-all without sacrificing the ease of use that managers have come to expect from EIS front ends. Perhaps the most aggressive attempt to access external information is News Navigator from Comshare. Part of Commander Executive 2.1, the latest upgrade in Comshare's **front - end** software for workstations, News Navigator allows executives to search through gigabytes of recent and historical stock quotes, financial statements, and 400 publications on the Dow Jones News Retrieval Service databases. Title: Accounting for change

Author(s): Todd, D.

Journal: InformationWEEK no.297 p.20-1

Publication Date: 26 Nov. 1990 Country of Publication: USA

CODEN: INFWE4 ISSN: 8750-6874

Language: English Document Type: Journal Paper (JP)

Treatment: General, Review (G)

Abstract: As more businesses go global in the 1990s, they are demanding accounting and financial management packages that accurately mirror their activities. Financial packages that automatically switch between multiple language **interfaces** and different countries' accounting rules have become a must for companies with international operations. But those firms have also begun to insist that previously separate functions such as EDI (electronic data interchange), **human** resources, manufacturing resource **planning** (MRP), and **financial** management are now bundled into the same package that handles routine accounting procedures, including general ledger, accounts payable, and billing receivables. The author discusses the implementation of an integrated system from the German software company SAP AG. The system, known as R/2, consists of 10 diverse applications integrated around a core technology base. The author discusses examples of companies implementing R/2 and other similar systems using open architecture. (0 Refs)

Abstract: The authors use the GOMS models to predict error rates and mental times for translating financial concepts into equations in two widely used **interface** representations. The first of these, common to spreadsheet packages, is characterized by non-mnemonic naming and absolute referencing of variables. The second, common to non-procedural command-driven software, is characterized by mnemonic naming conventions and relative referencing of variables. These predictions were tested in an experiment using experienced **financial analysts**. Although the **interface** that allows mnemonic and relative names (called keyword) takes longer overall, it produces seventy-five percent fewer simple errors and requires less mental effort. Given the overall serious cost of errors in **financial models**, **interfaces** having the keyword representation are far superior. (12 Refs)

Abstract: Within the past few years the technology known as expert systems has crossed the threshold from an academic research topic to a practical tool. This transition has been facilitated by the development of powerful software tools and by the introduction of powerful hardware tools. A design is considered that which combines the expert system software (inference engine, user **interface** , knowledge acquisition module) on a LISP processor and a tightly coupled data acquisition software module on an MC68111 processor. Unique strategies for system design were implemented to offer the user complete flexibility in achieving the desired response time. Integral to the knowledge base is a powerful relational database management module that allowed the user to selectively invoke knowledge based on the value of a dynamic data point, or some other condition in the process. The expert system, called PICON, was initially designed for a chemical plant. It has since been adapted to applications in robotics, communication network management, space station design, intelligent building supervisor, **real - time financial advisors** , discrete manufacturing, and a diverse range of applications in process control. Treatment: Practical (P)

Abstract: FAME is an exploratory set of models and software which demonstrate a powerful new approach to analytic modeling. Users of FAME have the ability to build their own models using any combination of pre-specified or user defined building blocks (modules). The user **interface** is menu-driven, and the steps of combining modules into a model, solving the model, and generating reports and answers to 'what-if' questions are handled transparently by utility software. FAME gives analysts the ability to create, modify, extend, custom-tailor, and solve **financial** and economic **models** in **real time** with little or no programming. (0 Refs)

Abstract: The authors are investigating explanation techniques as a means to improve the cognitive coupling in joint **human** -computer decision making systems. In this context, an extended version of Kosy and Wise's counterfactual explanation facility for **financial planning models** (1984) has been implemented. Its usefulness as a **front end** to conventional spreadsheet programs is currently evaluated in an experiment with business students. They plan to extend this initial work by including causal explanation techniques and representations of domain principles. As they are only at the beginning of the research, currently the two major differences to the work of others are the novel combination of different techniques and the explicit context of improved man-machine interaction. Treatment: General, Review (G); Practical (P)

Abstract: VisiCalc is dead and gone, but spreadsheets **live** on. The question is, are they adequate for **financial planners**? Alas, far too many micro-computer users are addicted to their spreadsheets. To get rapid, goal-seeking responses, you need a **financial modeling** program like Micro-DSS/Finance, Encore, IFPS Personal, Plan-80, Microprophit or TK!Solver. **Financial modeling** programs provide easy-to-follow documentation. This means reduced debugging and updating time particularly for large models. Remember though, a **financial modelling** program is not

Search Report from Ginger D. Roberts

a replacement for a spreadsheet, but rather a complement to it. (0 Refs)

Title: Using color graphics to heighten efficiency

Author(s): Sheridan, S.

Journal: The Office vol.102, no.3 p.78, 83, 95

Publication Date: Sept. 1985 Country of Publication: USA

CODEN: OFISAD ISSN: 0030-0128

Language: English Document Type: Journal Paper (JP)

Treatment: General, Review (G)

Abstract: Color is the natural choice wherever the **human -machine interface** must be smooth, efficient and problem-free. So it's somewhat surprising that color graphic computer systems have not yet completely dominated the office environment. One problem is that office managers do not understand the critical nature of employee productivity. The new developments in color means anyone who doesn't consider color is probably making a mistake. And it may be a very costly mistake. As the price of color has dropped, the number of high-quality color software packages has increased dramatically. There are programs available that show inventory, accounting, **financial planning**, and database records-all in color, with vivid graphs that are easier to read and understand than any black and white computer printout could ever be. Moving to color is the smart way to meet the challenge of the office of the future. Managers who are thinking ahead are choosing colour now. It gives them the edge in productivity. (0 Refs)

An analysis of selected psychological and demographic variables and the job satisfaction of certified financial planners

Author: McGowan, Helen N.

Degree: Ph.D.

Year: 1999

Corporate Source/Institution: New York University (0146)

Chairperson: Michael Bronner

Source: VOLUME 61/04-B OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 2261. 199 PAGES

The degree of job satisfaction that workers experience as been identified with the individual's quality of life and it impacts the physical well-being as well as the psychological well-being of that individual. Americans consistently rank their jobs as the number one source of stress in their **lives**. Statistics indicate that in the United States costs run at least \$200 billion a year in stress-related absenteeism, lower productivity, increased compensation claims, health insurance and direct medical expenses. In addition to this, turnover involves expenses of recruiting, selecting and training new employees.

Recent studies have shown that the better the fit between an individual's abilities and the job requirements, the higher the job satisfaction. Research also indicates that when personality type and occupation type are not congruent, occupational dissatisfaction will likely result. Researchers agree that sources and correlates of overall job satisfaction vary among organizations and research should be done across professions to identify the right person for the right job.

A relatively new profession has evolved over the last two decades. It is called personal **financial planning**. A decade ago it was estimated that there were between 250,000 and 400,000 people across the country calling themselves personal **financial planners**. Well over 10 million individuals and families have consulted personal **financial planners**. From every indication this profession will continue to grow. Professional designations have been developed to increase professionalism and credibility of personal **financial planners**. One such designation is Certified **Financial Planners**. Requirements to become a Certified **Financial Planner** include education, examination, experience and ethics.

This study analyzed selected psychological and demographic variables and the job satisfaction of Certified **Financial Planners** to determine if there were any characteristics that could be identified as influencing the job satisfaction of Certified **Financial Planners**. A national study of 400 Certified **Financial Planners** was conducted and 228 responded. Results indicate that the independent demographic variables, locus of control and congruence of values influenced work, pay and promotions satisfaction of Certified **Financial Planners**.

THE ROLE OF KNOWLEDGE AND EXPERIENCE IN STRUCTURING PROBLEM-SOLVING PERFORMANCE

Author: HERSHEY, DOUGLAS ALAN

Search Report from Ginger D. Roberts

Degree: PH.D.
Year: 1990
Corporate Source/Institution: UNIVERSITY OF SOUTHERN CALIFORNIA (0208)
Chairman: DAVID A. WALSH
Source: VOLUME 51/07-B OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 3596.

Since the early 1900's, the concept of transfer of learning has been a recurrent theme in problem solving research. Transfer is defined as the way in which "knowledge acquired in one (problem solving) situation applies (or fails to apply) in other situations" (Single & Anderson, 1989). It is believed that by understanding the mechanisms of transfer, educational programs could be designed which enhance **human** problem solving performance.

The present study was designed to examine how individuals learn to solve cognitively complex, real-world problems. The study was a conceptual replication and extension of an experiment conducted by Hershey, Walsh, Read, and Chulef (1990). In that previous study, expert and novice **financial planners** were required to determine whether a hypothetical investor should contribute funds into a retirement savings program. Results showed the performance of experts to be more goal-directed and efficient than that of novices, a difference attributed to experts' superior knowledge of the task, and prior problem solving experience.

In the present research, three groups of problem solvers who varied in their knowledge of retirement planning, were asked to make six, complex retirement investment decisions. The expert group was degreed accountants who were currently working in the field of **financial planning**. The novice group was undergraduate college students who had no special knowledge of retirement planning, and the trainees were college students who had taken a six hour course on investing for retirement.

Results indicated that trainees produced the best solutions to the problems, by processing the most critical pieces of task information in a highly efficient manner. Experts outperformed novices, as expected, however their solutions were only about half as good as those produced by trainees. Each of the three groups used qualitatively different types of information search and selection strategies to solve the problems, which are believed to be responsible for the observed performance differences.

These findings suggest that two different types of transfer of learning are responsible for these differential patterns of information processing. These two transfer effects are interpreted in terms of a recently developed model of problem solving performance: Script-based information processing. (Copies available exclusively from Micrographics Department, Doheny Library, USC, Los Angeles, CA 90089-0182.)

FINANCIAL ANALYSTS ' FORECASTS AND FINANCIAL ANALYSTS ' FORECASTING CUES

Author: PAVA, MOSES L.

Degree: PH.D.

Year: 1990

Corporate Source/Institution: NEW YORK UNIVERSITY, GRADUATE SCHOOL OF
BUSINESS ADMINISTRATION (0868)

CHAIRMAN: JOSHUA RONEN

Source: VOLUME 51/04-A OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 1296. 107 PAGES

While much research has been devoted to studying the usefulness of

financial analysts' forecasts and forecast revisions, relatively little research has been directed to the question of how analysts form their forecasts and forecast revisions. In this study, a **financial analyst forecasting model** is developed through an analysis and examination of the **actual** research reports published by **financial analysts**. The **model** includes macro-economic variables, industry-wide variables, and firm-specific variables (including the surprise component in earnings per share and abnormal returns), as explanatory variables. The model is tested in two industries, the pharmaceutical preparations industry (drug), and the automobile manufacturing industry, using data from 1980-1985. The results indicate that for a majority of firms the postulated model possesses explanatory power. In addition, the model outperforms a naive model in predicting the sign, but not the magnitude of future forecast revisions.

OPINIONS OF SELECTED PROFESSIONALS CONCERNING ACCOUNTING FOR LISTED CALL STOCK OPTIONS

Author: THOMPSON, CAROLYN LOUISE
Degree: PH.D.
Year: 1980
Corporate Source/Institution: UNIVERSITY OF ARKANSAS (0011)
Source: VOLUME 41/05-A OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 2179. 149 PAGES

The objectives established for the dissertation were (1) to present an analysis of alternative accounting procedures for call stock options, (2) to determine the preferences of selected professionals toward alternative accounting procedures for listed call options, and (3) to determine the feasibility of additional authoritative support for accounting procedures for listed call options. The research included a review of the literature and the sampling of four groups by mail questionnaire.

The criteria (1) familiarity with current accounting practices for marketable equity securities and (2) familiarity with investments in listed call options were used in the sample selection procedure. The four groups surveyed were Chartered **Financial Analysts** employed by banks or insurance companies, Chartered **Financial Analysts** employed as **investment counselors**, Certified Public Accountants, and corporate financial executives. The opinions of each group were elicited on matters related to accounting for call option positions held by companies not having specialized accounting practices for marketable securities. Specific questions were asked related to accounting problems resulting from the application of FASB--Statement No. 12 to long positions in call options. A chi square test for goodness of fit and Kendall's coefficient of concordance were used in the statistical analysis of questionnaire responses.

Over 85 percent of respondents in each survey group believed accounting procedures for listed call options should not be exempt from current accounting standards. However, over 63 percent in each group, except accountants, indicated clarifying guidelines are needed.

A majority in each group believed the recoverability of price decreases on stocks and call options should be assessed on the same accounting guidelines. Furthermore, a majority indicated as not acceptable the deferral through stockholders' equity of realized gains and losses associated with a noncurrent portfolio.

Most respondents preferred that the premium received from writing uncovered options be reported as a contraportfolio item or as a liability. Furthermore, most respondents preferred that a covered option position be

accounted for as two separate securities, rather than as one combined investment unit.

The **strategy**, writing covered options, was rated by most respondents as being important in both a current and a noncurrent portfolio. It was seen as having **actual** importance as a cause of increased trading in options, and as having potential importance as a means of increasing the return on investments.

Based on the survey results, examples of guidelines for the furtherance of consistency in accounting for call options were stated. The guidelines were suggested as being deserving of additional investigation. They included the requirements summarized below: (1) The accounting for listed call options should follow in substance the procedures used by a company for its other marketable equity securities. (2) Notes to the financial statements should disclose gross unrealized gains and gross unrealized losses attributable to long positions in call options in each portfolio. The notes should include any special disclosures necessary to report fairly options associated with either a noncurrent portfolio of securities or a portfolio presented on an unclassified balance sheet. Appropriate disclosures include a statement of objective(s) for buying options and the amount of realized gains and losses reported in net income. (3) Uncovered call options should be presented on the balance sheet as a contraportfolio item. Notes are to be used to present any supplementary information necessary for a fair and useful disclosure of the role of uncovered options. (4) The market value of a stock used as security for a short call option should not be limited to the exercise price of the option. Furthermore, all short calls should be reported according to the guidelines established for uncovered options. Explanatory notes should be used to accomplish a fair and useful presentation of all covered option positions.

AN INTERACTIVE FINANCIAL FORECASTING MODEL FOR MISSISSIPPI DELTA FARMING

Author: RAY, J. O., III

Degree: D.B.A.

Year: 1985

Corporate Source/Institution: MISSISSIPPI STATE UNIVERSITY (0132)

Source: VOLUME 47/03-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 971. 307 PAGES

The purpose of the study is to design an interactive model to perform farm financial forecasting. The functions which the model is intended to serve are: (1) estimate harvest yields, (2) estimate farm net income, (3) provide capital budgeting for investment analysis, and (4) prepare a complete farm budget.

A judgment sample of agricultural extension consultants, county agents, farmers, and financial loan officers were interviewed to ascertain data needed for the study. Crop yield was identified as the planning target. Temperature and precipitation at the growing season stages and fertilizer were identified as significant environmental influences. Pertinent experiential information concerning information needs and problems of farm decision making were provided.

Relevant literature was located in journals, books, and dissertations. Data concerning agricultural production and yields in the Delta region, fertilizer usage, climatic data, commodity prices, and crop support prices were gathered.

Environmental factors found to be relevant were regressed against

actual harvest yields to determine whether significant relationships existed between the yields and the environmental factors. Precipitation was found to be more significant than temperature at any of the four growth stages. Precipitation also was more significant than fertilizer usage. The predicted yields were within the 95 percent confidence limits for those predictions.

The market share of each crop in the region as a percentage of the five crops studied was calculated for the region. Soybeans and wheat appeared to be increasing in market share, while cotton and rice gradually declined. Corn exhibited minimal significance in market share.

All four functions of the model appeared to be successfully validated through a hypothetical scenario. The effects on yields, and resulting profits, of varying the independent variables were calculated for 95 percent confidence limits around the variable means. It was recommended that irrigation cost factors should be studied for possible inclusion in crop budgets for crops other than rice. It was recommended also that the study be replicated for other crop reporting districts, and other agricultural enterprises such as catfish farming, **livestock**, and poultry. A further recommendation was that grain sorghum be studied as a crop that is supplanting corn in the Delta. For continued use of the model over time, the historical data series should be updated periodically.

LOCAL CALL-IN RADIO: A STUDY OF THE SEARCH FOR ADVICE AND SOCIAL NETWORKS
(MASS MEDIA, COMMUNICATIONS, TALK SHOWS)
Author: BRONSTEIN, EVA MINDY
Degree: PH.D.
Year: 1984
Corporate Source/Institution: CITY UNIVERSITY OF NEW YORK (0046)
Source: VOLUME 45/01-A OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 7. 349 PAGES

The present study used content analysis, survey research and in-depth personal interviews to test whether resourceful people turn to advice formats on radio in times of increased change and impermanence. An examination of the social network possibilities was also conducted. Its history and unique characteristics of intimacy, immediacy and anonymity make radio a suitable source of information and advice, as well as the creation of a social network of "unfamiliar others". The findings of this study goes counter to previous studies that were critical of those who turned to call-in radio.

It was found that listeners selectively expose themselves to call-in hosts. Call-in radio both reflected and promoted shared social reality. Many listeners consider call-in radio to be a "Window on the World," calling it an honest slice-of life, a vehicle for catharsis and vicarious experience. Hosts were considered credible and proficient.

Topics such as health, personal **finance**, family **advice** and the economy were considered by the listeners to be most interesting and most likely to lead to discussion and personal use.

The call-in hosts were found to "frame" calls by using cues to both encourage and discourage calls as well as assert authority. The audience perception of hosts as believable and expert was confirmed by content analysis and radio staff evaluation.

Social learning and parasocial interaction were two consequences of call-in radio. Listeners admitted to vicarious reinforcement and considered the hosts to be friends and co-workers.

Radio anonymity was necessary to open the discussion of private issues and protect callers from sanctions. Listeners and radio staff identify three motivations for calling: Free advice, holding a legitimate question, and ventilation of frustration.

Fishman's work on conversation analysis and gender difference was applied to host and caller interaction. Male callers made more statements, female callers asked for questions.

Call-in radio staff were found to be "hegemonic" as a result their self-defined roles, responsibilities, the "community" they attend to, and the screening process which defines and limits discussion. Hosts were found, in general, to present a conservative view of the world that protects the status quo. However, call-in radio was found a more open forum of ideas than other commercial radio formats.

PERSONAL FINANCIAL PLANNING : DETERMINATION OF CUSTOMER PROFILES, NEEDS AND VIEWPOINTS

Author: ULIVI, RICARDO MARTIN

Degree: PH.D.

Year: 1980

Corporate Source/Institution: UNIVERSITY OF ARKANSAS (0011)

Source: VOLUME 41/05-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 2212. 232 PAGES

Personal **financial planning** is a service that springs from the need for objective and centralized advice on a wide range of areas such as investments, insurance, money management, taxes, estate planning and others. A personal **financial planner** fits each one of those individual areas into a well-balanced, integrated plan, after a comprehensive financial analysis is undertaken--guided by a family's goals, attitudes and objectives.

The purposes of this study were (1) to identify characteristics which discriminate between households that are interested and those not interested in obtaining a personal **financial plan**; (2) to determine the relative importance of the various differentiating characteristics; (3) to develop demographic and life style profiles of consumers that reported an interest in obtaining a personal **financial plan**; (4) to relate several aspects of personal financial management and behavior to interest in obtaining a personal **financial plan**; (5) to assess the needs and viewpoints of consumers regarding personal **financial planning**; and (6) to determine how attitude towards personal **financial planning** is related to interest in obtaining this service.

The data was collected by means of a questionnaire mailed to participants of the Arkansas Household Research Panel during the Fall, 1979. Various analytical tools were utilized to analyze the data, including discriminant and factor analyses, t-tests, and Chi Square tests of independence.

The major findings are briefly summarized as follows: the discriminant function correctly classified 68 percent of households into either of two groups: (1) those interested in obtaining a personal **financial plan**, and (2) those not interested. Attitude towards **financial planning** was the most important discriminating variable among the groups, with age being second, but negatively related to interest in **financial planning**.

The typical head of household interested in obtaining a personal **financial plan** was found to be 25-35 years old, well educated with at

least a bachelor's degree, renting the home in which he/she **lives** , and with the spouse also employed. This person holds cosmopolitan views, is an avid information seeker, self-confident, community minded and a credit user. The individual's interest in **financial planning** is increased by being engaged in a discussion about his/her financial goals and objectives with a **financial planner** . Additionally, those persons making real estate investments are more interested in **financial planning** than those who do not make real estate investments.

The data implied that consumers interested in obtaining a personal **financial plan** attribute a high degree of importance to their active participation in determining the broad goals required for developing a **financial plan** .

Individuals believe they too are excellent sources for developing **financial plans** , along with bankers, accountants, attorneys, and certified **financial planners** . The study also suggests that **financial planners** should base their fees on a sliding scale according to income; that is, the higher the clients income, the more he/she should be charged for a personal **financial plan** .

Finally, it was determined that households interested in obtaining a personal **financial plan** have a more favorable attitude towards the concept of **financial planning** than those who are not interested in this service.

In conclusion, the findings should provide valuable information to assist the **financial planning** industry to identify prospective customers more easily.

Making the best ergonomics investment
Riel, Philippe F; Imbeau, Daniel
IIE Solutions v. 27 (June 1995) p. 30-3
DOCUMENT TYPE: Feature Article ISSN: 1085-1259

ABSTRACT: The issues associated with investing in ergonomics are discussed. As companies face rising health and safety (H&S) problems that will probably translate into additional long-term costs, ergonomists and industrial engineers urge managers to make quick and decisive H&S interventions. Conversely, managers and other cost-sensitive groups are concerned about such investments and their effect on profitability. They tend to doubt the pertinence of these **investments** on a **strategic** level and question the capability of ergonomics as a tool to diagnose H&S risks. The issue of ergonomics proposal and evaluation is a complex one that is not likely to be solved in the absence of a comprehensive decision support process embedded in the proper safety management process. This type of decision support should include a comprehensive model of H&S costs, a related information database for feeding the model, and a user **interface** enabling decision makers to efficiently handle complex investment analyses.

QCharts gives real - time stock information
Levine, Daniel
PC World , November 1, 1998 , v16 n11 p89, 1 Page(s)

ISSN: 0737-8939

Company Name: Quote.com

URL: <http://www.quote.com> <http://www.equis.com>

Product Name: QCharts

Presents a mixed review of Qcharts (software free; online service \$110 a month, \$839 a year) from Quote.com, a program that provides **realtime** quotes, charts, and financial data via the Internet. Says that comparable services run around \$1800 a year. Explains how its use of a proprietary server technology, that highly compresses data, allows large amounts of information to download quickly. Says that built-in **browser** windows connect directly to online brokerage firms. Notes that features include multiple windows to follow daily market fluctuations, color coding to identify ups and downs, programmable alerts for stock prices, and customized host lists. Indicates that better chart readers are available and recommends equis.com/java as an example. Cautions that automatic alerts about breaking news and programmable **browser** windows are not provided. Includes one scorecard. (amg)

Quicken Strikes back, challenging Money 99 -- Quicken Deluxe 99; Quicken Home & Business 99

Methvin, David W

Windows Magazine , November 1, 1998 , v9 n11 p46, 1 Page(s)

ISSN: 060-1066

Company Name: Intuit

Product Name: Quicken Deluxe 99; Quicken Home & Business 99

Presents a favorable review of two finance programs for IBM PC compatibles with Windows 95, 98, or NT: Quicken Deluxe 99 (\$59.99), and Quicken Home & Business 99 (\$89.99), from Intuit (800, 650). Says Quicken Deluxe 99 has what-if scenarios that help user answer common financial questions and its step-by-step wizards incorporate **actual live** data from user's accounts. States this program offers greatly improved Web features for paying bills and gathering financial information. Says it has a complex **interface** . Reports Quicken Home & Business 99 features small-business tools such as invoice generation and tracking. Says its invoicing lets user customize the look and content of the invoices, track expenses, and charge them to a specific business account. However reviewer found a bug in the expense allocation process that caused this program to crash. Says if bug is fixed, it will go on WinList next month. Includes one screen display, one sidebar, and two product summaries.

Search Report from Ginger D. Roberts

Windows-based systems from two manufacturers. Includes a very favorable review of Microsoft Money 98 (\$54.95) from Microsoft Corp. of Redmond, WA (800, 206). Points out that this package provides a fully-redesigned **browser** -style **interface** with a navigation structure including integrated Web links. Emphasizes its impressive Debt Reduction Planner, but complains of problems connecting to an ISP from within Money. Names it a Stellar product. Also includes a favorable review of Quicken Deluxe 98 (\$59.95) from Intuit (800, 415). Notes that this version adds Web links, audio and **video** help, and basic ease-of-use enhancements. Also includes the Mutual Fund Finder for selecting the right investment. Warns that there are not enough enhancements to warrant upgrading from the previous version, though there are no complaints about this new version. Includes three screen displays, two product summaries, and one sidebar. (kgh)

Microsoft Corp. and Progressive Networks announce streaming media collaboration

Information Today , September 1, 1997 , v14 n8 p43, 1 Page(s)
ISSN: 8755-6286

Company Name: Progressive Networks; Microsoft

Product Name: RealAudio; RealVideo; Microsoft NetShow; Microsoft Internet Explorer

Announces an agreement between Microsoft Corp. of Redmond, WA (206) and Progressive Networks, Inc. of Seattle, WA (206) for defining streaming media standards and furthering the development of streaming **audio** and **video** technologies. Claims that Microsoft plans to license Progressive's RealAudio and RealVideo technologies, and that Progressive will provide support for Microsoft technologies. Explains that Microsoft will include RealAudio and RealVideo 4.0 technologies in its NetShow streaming server and its Internet Explorer **browser** , and that each will ensure interoperability between the two companies' products. Adds that the companies are also working to help define the Active Streaming Format (ASF). Also notes that Microsoft has made a minority investment in Progressive Networks. Suggests that this alliance will accelerate the availability of streaming-media content on the Internet. (kgh)

IBM bets big on Web R&D -- \$100 million backs up commitment to Internet technology

Scannell, Ed

InfoWorld , May 26, 1997 , v19 n21 p1, 26, 2 Page(s)

ISSN: 0199-6649

Company Name: IBM Corp.

Reports that IBM Corp. of Armonk, NY is committing \$100 million, or about 25 percent of its total research budget, to the development of a wide variety of Internet- and networking-based technologies. Says that the allocation is intended to keep IBM on the leading edge of new technologies such as conferencing and **video** applications, Java development, and Web site management. Adds that the products that will benefit from the funding include an intranet management tool capable of handling as many as 10,000 nodes, Web-based whiteboard display manager, **video** hot-linking technology, language compilers, and a lightweight **browser** . Adds that IBM

Search Report from Ginger D. Roberts

research groups are also working on the direct integration of audio and **video** capabilities into a number of workgroup technologies. Includes one sidebar. (dpm)

New tax software: Intuit's TurboTax Deluxe takes top honors

Mooney, Shane

PC World , February 1, 1997 , v15 n2 p84, 1 Page(s)

ISSN: 0737-8939

Company Name: Block Financial; Parsons Technology; Intuit

Product Name: Kiplinger TaxCut Deluxe Multimedia; Personal Tax Edge;

TurboTax Deluxe

Presents a comparative review of three tax preparation software programs. Gives Kiplinger TaxCut Deluxe Multimedia (\$30) from Block Financial (800) a favorable review; Personal Tax Edge (\$19) from Parsons Technology (888) a mixed review; and TurboTax Deluxe (\$50) from Intuit (800) a favorable review. Says that Kiplinger TaxCut Deluxe includes two hours of **video** tips and is a good choice for simple returns. However, notes that the instructions were confusing at times. Comments that Personal Tax Edge's low price is its best feature. However, complains that the **interface** was not user friendly and form completion was tedious. Recommends TurboTax Deluxe as the best of the three. Says that it offers an easy-to-use intuitive **interface** that led the user through the process by asking relevant questions and offering clear advice. However, some minor importing problems were noted. Includes two screen displays and two product summaries. (phi)

Patz, Joel T

Windows Magazine , May 1, 1995 , v6 n5 p196, 1 Page(s)

ISSN: 1060-1066

Company Name: Omega Research

Product Name: Wall Street Analyst

Presents a favorable review of Wall Street Analyst v1.0 (\$99), an investment analysis program from Omega Research (800, 305). Runs on IBM PC compatibles with 4MB RAM, 15MB hard disk space, and Windows. Indicates that Wall Street Analyst (WSA) analyzes stocks, commodities, and mutual funds, based on user-defined information or data downloaded from subscription services. Claims that WSA is easy to use and provides an excellent tutorial; its main screen is the Chart, which graphically depicts market information for a particular security. Notes that a mouse click on any point in the Chart window reveals detailed performance data, and you can set indicators which trigger an alert when certain conditions are met. Features include Analysts which derive long- and short-term outlooks, combine indicators to assess a market, and review a company's **actual** performance. Also says WSA has a pleasant, customizable **interface** . Includes one screen display. (jo)

WealthBuilder--the road to financial planning

Lignugaris, Roger W

PCM, January 1, 1990, v7 n7 p94-95, 2 Pages

ISSN: 0747-0460

Search Report from Ginger D. Roberts

Presents a favorable review of WealthBuilder (\$249.95), a **financial planning** program from Reality Technologies, Philadelphia, PA (215, 800). The program queries the user about current assets, goal assets, income and expenses, and rate-of-return expectations. It then constructs a **financial plan**, based on the yield curve of T-Bills, which specifies how much must be set aside to reach goals without violating risk tolerance and suggests a model portfolio, including vehicles to meet objectives. It is easy to use and the package includes a **videotape** presenting a tutorial on investments. The package is difficult to install, however, and requires at least 4MB free disk space. Says the package "could make a whole lot of **financial planners** redundant." (djd)

Dollars and Sense

Field, Cynthia E

inCider, January 1, 1990, v8 n1 p51, 1 Pages

ISSN: 0740-0101

Presents a favorable review of Dollars and Sense 2.0 (\$119.95), a personal financial management package from Monogram Software, Torrance, CA (213). The program requires an Apple II with 128K RAM, 3 1/2 inch floppy drive or hard drive, and a mouse is optional. Although it does not follow Apple **Human Interface** standards, it is reasonably easy to learn. It provides a full range of financial managements tools, including the capability to produce bar graphs and print checks with vouchers attached. It is readily customized and organized into Household, Business, and Tax Preparation modules. On-line help, both general and specific, is available. A buyer's guide on p50 compares features of seven personal-finance programs. (djd)

REVIEW TYPE: Product Comparison

GRADE: Product Comparison, No Rating

Microsoft's Microsoft Money 2000 Deluxe, Block Financial's Kiplinger's NetWealth, and Intuit's Quicken Deluxe 2000 are compared personal finance programs. The editors' choice is Money 2000 Deluxe by a hair, since it has a less cluttered and easier to use **interface** and more dependable links to online information. Quicken still provides the best checking account balancing and reconciliation features. NetWealth, which has a skimpy feature set and a kludgy design, is not really in the same league with Money or Quicken. Money and Quicken are available in three editions:

Search Report from Ginger D. Roberts

Standard or Basic, for common account management and budgeting; Deluxe, with added **planning** and **investment** tools; and versions for home and business use, which add invoicing, contact management, and business expense tracking to the Deluxe editions. Quicken has a fourth version, Quicken Suite 2000, which also provides TurboTax software. Money 2000 Deluxe has excellent portfolio tracking and Web links, and a very attractive **GUI** that is easy to navigate. A more granular setup wizard enhances tools for setting up accounts. NetWealth provides only a **financial planning** component, with some limited investment tracking. The program seems thrown together from shareware and exploits the Web **browser** to the detriment of usefulness. Quicken Deluxe 2000 has a huge database of **real - time** financial quotes and news, and many new reporting, graphing, planning and online tools.

Equis International's MetaStock for Windows 95, Intuit's Quicken Suite 2000, Microsoft Money 99 Financial Suite, Omega Research's Omega Research ProSuite 2000i, and Worden Brothers' TeleChart 2000 are among many investment management products described. Some tools are highly technical and require expertise in investing, accounting, and mathematical analysis, while others are very easy-to-use. High-end packages include MetaStock, OmniTrader **REAL TIME** Edition, ProSuite, TIP@Wallstreet, and TeleChart 2000. ProSuite 2000i, for example, has sophisticated analysis tools and the ability to construct custom trading systems that automatically scan investments based on programmed criteria and to make Buy/Sell recommendations. Personal StockMonitor 3.0 Gold lets the user do the analysis and research, but tracks investments; its watch list is tracked in **real time**. Suite 2000 and Money 99 Financial Suite both provide integrated Web **browsers** for access to other online Internet investment sites. Both integrate with accounting and tax software, features that are not provided in the professional level products. Quicken and Money also provide **financial planning** tools. MetaStock is a high-end charting/analysis toolset with excellent reporting and robust **real - time** indicators; its Downloader tool downloads from many services, including Telescan, CompuServe, Dial/Data, DataLink, and Signal/BMI. Tip@Wallstreet uses Telescan's subscription service and provides many analysis and charting tools, in addition to access to news, newsletters, and company reports.

Effective communication via the World Wide Web requires sites that have a clean design, intuitive navigation, an interactive experience, and clearly presented, in-depth content. 10 major Web sites are reviewed with these criteria in mind. The Library of Congress's American Memory Collections Web site presents a wealth of early-20th century audio, **video**, and text content. The site is exceptionally well organized and navigation is superior, particularly given the volume of content. The John Hancock Mutual Life Insurance Company's site is admirable for its respect for user security. The site's distinguishing features include a helpful **financial planner** with a good user **interface**. L.L. Bean's e-commerce site is notable in the way it mirrors the firm's well-known catalog appearance. It also provides other features, including personal greeting cards, and information about parks and outdoor activity in the U.S. Fodor Travel Guides aimed for an uncluttered site, and depends on extensive information stored in relational databases to provide users with answers to questions. Also meeting the criteria were Learn2.com, The Ability Utility, OnHealth Network Company, TheTrip.com, the Bob Dylan Official World Wide Web Site, and the Dolby Laboratories Web site.

Microsoft's Microsoft Money 99, a personal financial package, goes a step further than other packages with superb connectivity to the Internet to

mingle investment tools with financial information. All financial research can be updated in **real time** for easy decision-making. Installation of the program is very straightforward, and the suite includes a good introductory tour. There are a few minor **interface** glitches, but none of them alter the final results. When the program is launched, users start out in their own home page. From there, they have easy access to other sections of the program and related information on the Internet. By personalizing the user's home page, it is possible to select where information comes from and what type of information is displayed. The Bill Reminder notifies the user of upcoming, overdue, or automatically entered bills and deposits that have been scheduled. After setting up the home page, users set up all their accounts in that section. Money 99 will also allow users to establish an automatic Internet connection with the accounts, depending on what bank or financial institution is being used. The handy Planner section can be used to set up short- and long-term **financial plans** and goals. The Decision Center is full of links to useful financial sites.

MoneyStar's LifeScript, a graphical desktop application, is used by **financial planners** to build visual predictions of potential clients' financial status if they purchase a specific group of mutual funds. The software shows the possible deleterious effects of investing too little money for retirement and has increased sales by one-fifth. While most **financial planners** simply ask a few questions and write out the return on a legal pad, LifeScript shows the prospect their **lives**. These customers often then tell the consultant about funds that the **financial planner** never knew they had, and which can be invested to create a larger retirement income. Internet connectivity has a part in this scenario. The planner shows the prospect that he or she is logging onto the Internet to download stock, mutual fund, and bond performance figures into the application. This activity 'sells the sizzle of the Net,' says a spokesman for CalFed Investments, which makes the information 'seem more credible and conforming to the prospect's picture of the way modern finance should be conducted.' In addition, MoneyStar uses an invisible, IP-based document distribution system to save money and time. Thousands of brokers use MoneyStar's virtual distribution market for mutual funds, which provides an efficient electronic warehouse for listing of investment companies' products and to reach brokers.

The U.K. equities division of Credit Lyonnais deployed Market Watch from Midas-Kapiti on its equities trading floor. The Windows NT-based data distribution system has a customizable **interface** and beat Reuters' Triarch 2000 for the contract. Market Watch has been installed on 68 desktops within the group so far. It allows traders to tailor information delivered to a PC based on each trader's individual needs. Market Watch provides several advantages to Credit Lyonnais and other institutions. The software's compatibility with the latest spreadsheet technology is a big plus; this allows traders to transfer **real - time** market data into an Excel spreadsheet for further analysis. The level of customization is also impressive. Before rolling out Market Watch, the group used the previous version of the system, FIST, for distributing quotes from the London Stock Exchange directly to PCs on the trading floor. FIST was a terminal-based system, but it was still quick and user-friendly. However, it was limited in its news information. Credit Lyonnais has also deployed Market Watch on trading floors in Brussels and Madrid.

Accountants used to use handwritten lists and paper spreadsheets to track their clients' investments and goals. Now, estate and **financial planning** professionals use software to accomplish the same thing. **Financial planning** software gives the accountant the ability to show clients attractive and easy-to-read graphs, charts, and animated characters to illustrate clearly what they can spend, what they have to do, and how they

Search Report from Ginger D. Roberts

should prepare for the future. However, the software by itself does not make a good **financial planner**; **planners** must first understand the nature of planning before purchasing a software package that matches their own planning philosophies. The software then graphically depicts the plan, so the client can understand their financial **lives**. The software should be considered more of a communication tool. The best looking product is often the best option, since clients generally like to see what the accountant is talking about. Another advantage is that it is possible to sit with the client at the computer screen and substitute different variables, then instantly see the results. Current software is diverse and covers a lot of different areas, although for accountants, the key targets are projections and number-crunching.

Yahoo!'s namesake search engine, the Security and Exchange Commission's (SEC's) EDGAR, Secure Sockets Layer, Netscape Communications' Netscape Navigator, and Microsoft's Microsoft Internet Explorer 3.0 are products highlighted in a discussion of PC-based tools used for online investment activities. Yahoo! Finance provides complete, free information about stocks and mutual funds. Typing a stock ticker symbol shows a price chart for multiple time periods, in addition to news stories, a short company profile, analysts' earnings estimates, and quarterly and annual filings with the SEC. The SEC's EDGAR database provides company filings at no charge twenty-four hours after the SEC has received them. FreeEDGAR, a Web site, provides **real - time** access to filings. It rearranges the text of filings into an easier-to-view format. Excel 97 users can download an add-in that makes Excel a viewing **browser** and automatically retrieves data from FreeEDGAR. To get started with online trading, the user simply needs an SSL-supported **browser**, such as IE3 or Navigator 3.0. Online brokers will often open an account with no minimum balance, but some require an initial investment. Other topics covered include pitfalls; important decisions, such as choosing an online broker; tracking the portfolio; joining an investment club; and judging the value of online **investment advice**.

Internet Financial Network (IFN) provides **real - time** Securities and Exchange Commission (SEC) data to traders and analysts. EdgarWatch 2.0 and Instant News work together to create brief news stories from SEC filings. About four dozen customers use the tools, including Smith Barney. IFN has still competition in Dow Jones' Federal Filings, Primark's Disclosure, and Edgar Online's **Live** Edgar. Partes offers FreeEdgar to lure **financial analysts** to fee-based spreadsheet add-ins. IFN continues to advance its technology in order surpass the competition. The newest licensed product from IFN will be InfoGate, a **real - time** service that aggregates, filters, and disseminates news according to customers' preferences. InfoGate was constructed by extending the EdgarWatch **front - end** technology, and can do full-text searching and profiling of user preferences through portals, which are separate frames on the screen. Each portal offers a customized filter of pertinent information, and hypertext links to Web **browsers**, File Transfer Protocol, or Usenet sites. With Oracle's ConText natural language search engine, InfoGate maps ticker symbol, industry code, and related material in their portals. To add value to its software, IFN will carry, for example, CDA insider trading data from Investnet, Comtex, First Call, Net Earnings, Standard & Poor's, and Securities Data.

Intuit's Quicken Deluxe 98 is still the strong product that Quicken has always been, but for the first time, Microsoft Money 98 from Microsoft Corporation has surpassed Quicken in features. Money is the more innovative and helpful of the two products. Quicken, on the other hand, continues to dominate when it comes to accounting and bill-paying features. Quicken has

Search Report from Ginger D. Roberts

some new features too, but they are not as striking as Money's. For example, Quicken now lets the user gather all emergency records in a central location. Most of Quicken's changes are small, making it easier to use. Money 98, like Quicken, offers basic features such as account management, bill paying, and payroll management. The new flashier features of Money include the Planner, the Debt Reduction Planner, six new views for investments, a better **video** help system than Quicken's, and a distinctive new **interface**. The **interface** is a Web **browser** /push technology one. The program opens with a home page and offers links and frames as a means of navigation. Other features are also striking. The new Debt Reduction Planner excels over Quicken's and lets the user run what-if scenarios, determine when they will be out of money, and gives excellent advise. The six new investment views are: holding, performance, quotes, fundamentals, positions, and investment allocation.

OneSource Information Services' OneSource encompasses the best elements of the older pre-World Wide Web online business information service model and the newer, more Web-centered model. The older model is based on complete research services, large databases, closed proprietary systems, strong search software, and high costs. The Web-centered model uses links, collects business and financial data from the entire Web, and makes it available from one site, such as Hoover's Online, Wall Street Research Net, company Web sites, and many market-based sites from **brokers** and other **financial** companies. OneSource provides a broad-based business and financial information service that also gets superior marks for data integration and user-friendly design. Multiple platforms are supported, including the Web. OneSource began a decade ago as Lotus OneSource. It now combines data from different, important business sources into one tightly integrated information source. OneSource provides online access to data from leading producers in several categories, including corporate financials, business articles, analysts' reports, and other sources. More data than ever is available, with **real - time** updating and Web access. The Business **Browser** is the most useful module and has six sections. Other modules provide more specific research needs.

REVIEW TYPE: Company

Fidelity Investments has devised a three-pronged plan to provide content, transactions, and corporate services as a way to compete successfully in the competitive Internet-based retail brokerage arena. Cyber-brokers have to allow users to obtain all the tools they need, and that can only be accomplished with dynamic programming. From its World Wide Web site, Fidelity allows clients to buy and sell investments, inquire about investment strategies through e-mail, and to obtain the most current investment news compiled in **real time**. The site was developed by over 200 marketers and IS managers, and provides a RealAudio feed of stock prices, as well as Sun Microsystems' Java applets for calculation of returns on investment and development of **investment plans**. Fidelity, a relative latecomer to the growing market, began offering transactions early in 1997. Retail **investment brokers**, including Fidelity, are getting strong competition from such brokers as ETrade Group, which give large discounts for online trading to customers willing to do their own research and decision-making. Fidelity competes with Schwab and Liberty Financial Companies to provide online investment information, which is just about universal on financial companies' Web sites. Fidelity has multiple e-mail customer service representative working shifts to answer questions all day and all night, because Internet investors often work at night and early in the morning.

Intuit's **Quicken Financial Planner 2** helps users get through difficult questions about retirement and savings. Retirement planning can be difficult and confusing, but this Intuit program takes users through the process quickly and makes it easy to understand. A Quick Plan can be established within minutes just by entering in a little generalized data. A more sophisticated plan can be created by including more information. **Financial Planner**'s results are clear and straightforward. Simply by clicking on the Results tab, users will be told whether their retirement plans can be fully funded, or if there are problems. A what-if feature lets users easily manipulate the variables and adjust the plan to meet different goals. There are plenty of charts and graphs to depict the variables and trends, and the CD-ROM version of the program also includes advice and **videos** from Jane Bryant Quinn on major **financial planning** topics.

Visualization software is proliferating on the desktops of Wall Street's traders, providing investment managers with pertinent financial information in an intuitive format. One firm uses a proprietary system that allows analysts to sort through a database made up of 10 years worth of financial statements for 15,000 companies and seven years of earnings forecasts for 12,000 companies; the relationship between earnings and stock prices is shown in animated format and in multiple dimensions. Two other firms' systems model **real - time** events in 3D and present market information visualized as a football field. One of the most important aspects of effective visualization is zeroing in on the right symbols with which to visually represent esoteric financial data. Another difficult task is finding cost-effective, powerful visualization system configurations.

Small but growing number of econ analysts and investors fear that declining inflation, or 'disinflation', will depress stock prices and possibly lead to recession. Some fear disinflationary period and consequent 'bear' mkt has already begun. Are planning investment strategies in anticipation of 'bull' mkt for bonds and other fixed-income securities as alternative to stocks. Many investment analysts are increasing emphasis on securities yields. Wide gap between stock and bond yields since '57 is seen as closing. A small number of disinflationists fear that disinflation will cause deflation, or actual drop in general prices, which could result in major econ collapse. Various securities mkt and general econ forecasts examined (L.)

U.S. Net advertiser to launch service

SOUTH KOREA: DAUM COMMUNICATIONS IN TIE-UP

The Korea Herald (XBF) 23 Apr 1999 p.12

Language: ENGLISH

South Korea's Daum Communications, which provides free **e - mail** services, has agreed to form a joint venture with US Internet advertising firm 24/7 Media Inc to offer online advertising and direct marketing services in

Search Report from Ginger D. Roberts

South Korea. Daum will have a 35% stake in 24/7 Media Korea and it will manage the new Web advertising firm, which will have a paid-in capital of Won 700 mn. 24/7 Media will have the remaining 65% stake in the joint venture and the companies hope to launch their services in early May 1999. Meanwhile, Daum is negotiating for a US\$ 6 mn investment from another US company. It hopes to list on the Kosdaq at end-June 1999 when it completes its recapitalisation **plan** via foreign **investment** .

JM Sassoon gets piece of Net trading action

SINGAPORE: JM SASSOON TO START INTERNET BROKING

The Straits Times (XBB) 08 Dec 1998 p.57

Language: ENGLISH

Singapore's JM Sassoon & Co will start Internet broking via an Internet trading platform called Sass-i. Sass-i enables investors to trade based on **real - time** prices and orders are routed straight to the Stock Exchange of Singapore's trading system via an open **interface** named the Virtual Terminal **Interface** . The platform is different from current Internet trading systems in that it offers quality research on the Singapore and regional stock markets. The broking firm says the new service will not make remisiers redundant, but it allows them to provide better service and **investment advice** to their clients. The firm plans to increase its remisier base from 70 people to 120 in 1999.

3Com **plans** \$300 million **investment** in the region

THAILAND/CHINA/SINGAPORE: EXPANSION PLAN OF 3COM

Bangkok Post (XBN) 11 Nov 1998 database p.3

Language: ENGLISH

In the next few years, US\$ 300 mn will be pumped into Asia by 3Com. The firm has confidence in its Converged Networking Architecture, a technology which transmit **video** , voice and data on a single network. As such, 2,000 additional staff will be employed in the area. In Thailand, 3Com will set up a two-year training course, leading to a Masters in networking science. Knowledge in WAN, ATM, LAN and Network Management will be taught. Over at Singapore, 3Com will set up an R&D lab and a manufacturing facility. Modem, client access, switching and network **interface** card will be produced at the plant. Currently, training courses are available in Singapore- a cooperation with universities in the country. In China, 3Com will build up its marketing activities. US\$ 100 mn has been set aside for the nation. They include setting up a digital infrastructure and develop an integration capability for multimedia infrastructure project.

Local telecom service providers rushing to attract more foreign equi\

SOUTH KOREA: TELECOM CARRIERS GET FOREIGN FUND
The Korea Herald (XBF) 14 Mar 1998 P.7
Language: ENGLISH

South Korea's Hansol PCS, which plans to raise its capital by US\$ 150 mn in March or April 1998, intends to offer shares valued at US\$ 80 mn to overseas investors. The carrier is negotiating with overseas telecom operators, including Bell Canada which is keen to invest in the carrier. KT Freetel, another PCS carrier, also plans to raise its capital from WON 500 bn to WON 600 bn. The fund raised will be used to expand its networks. The telecom operator is negotiating with some overseas carriers, equipment makers and investment funds, including American Motorola which holds 2.8% stake in the operator. Air Media, a wireless data **communication** service provider, intends to raise its capital from US\$ 7 mn to US\$ 17 mn, providing a huge portion of shares to overseas investors, including Motorola. Shinsegi Telecomm, a digital **cellular** carrier, also plans to attract overseas funds to **finance** its expansion **plan**. Its current overseas shareholders - Air Touch and Southwestern Bell - now own over 20% of the carrier. However, they are interested to invest more in the carrier. Onse Telecom plans to raise funds to finance its entry into the inter-city service market. British Telecom, which intends to join hands with Dacom, is keen in purchasing a share in Onse Telecom.

MDIS urges holders to back rescue
UK: MDIS NEEDS SHAREHOLDERS' BACKING
Daily Telegraph (DT) 19 Jul 1997 p.b1
Language: ENGLISH

McDonnell Information Systems (MDIS), the computer services group, needs shareholder approval for its refinancing package. After five profit warnings in three years it wants to raise GBt 24.3mn in an open share offer, purchase an option to cut annual rent on its headquarters and give directors share options. MDIS has backing from its institutional investors accounting for 53% of shares but needs the **motion** to be passed by 75% of shareholders. They have engaged Close Brothers, corporate **finance advisors**, to persuade shareholders. In 1996, pre-tax losses were GBt 49.5mn, against GBt 39.4mn in 1995, however the first six months to June showed losses before exceptional items halved from GBt 9.2mn to GBt 4.5mn.

SIB criticises selling methods of life insurance industry

UK - SIB CRITICISES INSURANCE SELLING PRACTICES

Financial Times (C) 1992 (FT) 28 November 1992 p1

THE SELLING practices of the life insurance industry were sharply criticised yesterday by Mr Andrew Large, chairman of the Securities and Investments Board, the UK's main financial regulator. Mr Large referred to what he described as 'mis-selling' of life products in his speech to the annual conference of the Society of **Financial Advisers** in York. He said that 'human nature has been found wanting in too many cases and this has shown up as bad practices and disadvantaged clients'. As a result, he said, there was widespread public unease about the industry. The vast majority of salesmen working in the industry earn commission for each policy they sell, with the heaviest income accruing in the early years of the product. This practice of 'front - end loading' has encouraged, critics say, high-pressure selling. Customers who surrender their policies early find costs have taken a large chunk of their investment. It can take about 11 years for the surrender value of a 25-year endowment policy to equal the value of premiums paid.**

Middle ages evolve into a renaissance

UK - MIDLIFE CLIENTS NEED **FINANCIAL ADVICE**

Money Marketing (MOM) 4 June 1992 p28

UK: **Financial advice** is of benefit to clients reaching midlife because at this stage of their **lives** they have the inclination, the resources and the time for a more serious consideration of their personal **finances**.

Financial advisers seeking to take advantage of this market must pinpoint when **financial planning** is appropriate for someone in midlife: instead of taking a blanket approach and contacting all potential or current clients who have reached this stage, it would be more effective if the adviser focused on clients who will shortly undergo, or have recently undergone, a career change. This is because the client will probably be more receptive to the need to reassess their financial situation and take relevant action. The range of products suitable for midlife clients include pensions, PMI and PHI insurance, inheritance tax planning products, and savings and investments products, and source further discusses these products with relation to the midlife market.
